Postdoctoral Position in Cell Biology/Bioinformatics and Computational biology

Center for Integrative Genomics (CIG)

University of Lausanne, Switzerland (SIB)

The research project focus on regulatory networks and processes established by nuclear receptors upon physiological challenges. The successful post-doctoral fellow will work at the interface of molecular biology- bioinformatics- and network modeling. While the team is primarily working on biological models, the proposed position will be highly integrated within the Swiss Institute of Bioinformatics* located within the same building.

Applicants must have a Ph.D. in a related field (bioinformatics/mathematics/physics), and have an understanding and a keen interest in biological questions he/she will be working on.

The successful applicant will have the opportunity to work in a dynamic interdisciplinary environment and have access to cutting edge facilities and technologies.

Please send CV, list of publications, statement of research interests, and names of three referees, preferentially by e-mail, before 30th September 2009.
