## Job opening

The recently established **Netherlands Institute for Systems Biology (NISB)** in Amsterdam combines expertise and research in the field of molecular systems biology of four parties: the VU University Amsterdam, the University of Amsterdam, the national Institute for Atomic and Molecular Physics (AMOLF) and the national Institute for Mathematics and Computer Science (CWI).

NISB concentrates on a key issue in molecular and cellular life sciences: the integrated functioning of metabolic, signal transduction and genetic networks in combination with systems that drive the generation of shape and force in cells. The systems biology approach that is central to NISB research fully exploits the iterative cycle of combining experiment-driven modelling and model-drive experimentation.

NISB has a vacancy for a

### **Junior Group Leader (1.0 fte)**

that will be appointed for 5 years. A position for a Ph.D. student (4 years appointment) is available. The junior group will focus on a topic that explicitly integrates different disciplines in the institute, combining experimental work and mathematical modelling. The group must have intensive interactions with research groups in each of the four parties of NISB.

The successful candidate will be formally appointed by one of the four NISB partners, depending on his/her primary research interest.

Applications should contain: (i) CV including list of publications, (ii) brief description of proposed research (one page), (iii) brief overview of present research interest, (iv) three letters of recommendation, and (v) name, affiliation, phone number and email address of at least three referees.

Applications should be send to the director of NISB not later than three weeks after publication of this job opening. Information about this position can be obtained from the director.
